

## Special Issue

# Foundations of Quantum Computing

### Message from the Guest Editors

The advent of quantum information theory and the possibility of developing quantum computers gave rise to a rich and multidisciplinary field of research, gathering experts from physics, computer science, mathematics and logic. This peer-reviewed Special Issue is focused in both, the mathematical and physical foundations of quantum computing. Researchers are welcome to present their original and recent developments, as well as review papers, on the topics listed below.

- Foundations of Quantum Computing
- Quantum Information Theory
- Quantum Algorithms
- Computational Logic
- Mathematical Logic
- Lambda Calculus and Type Theory
- Logical Frameworks
- Domain Theory and Categorical Models
- Quantum Communication
- Quantum Correlations
- Uncertainty relations
- Violation of Bell Inequalities
- Decoherence and Classical Limit
- Quantum Contextuality
- Quantum Logic

## About the Journal

### Message from the Editor-in-Chief

*Axioms* is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Humberto Bustince

Department of Statistics, Computer Science and Mathematics, Public  
University of Navarra, 31006 Pamplona, Spain

### Author Benefits

#### Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High visibility:

indexed within SCIE (Web of Science), dblp, and other databases.

#### Journal Rank:

JCR - Q2 (Mathematics, Applied)
