

Special Issue

Axiomatic Foundations of Subjective Inference

Message from the Guest Editor

This special issue will be dedicated to axiomatic or formal foundations for methods in inference, focusing on, but not limited to, the analysis of interrelated dichotomies that play a central role in the discussion of subjective inference. In particular, the special issue will address axiomatic or formal aspects of subjective vs objective information; probabilistic vs. possibilistic rules of inference, and purposive or intentional vs. random sampling procedures.

This special issue seeks primarily articles contributing to the axiomatic or formal justification of inference methods but will also consider articles on the development of quantitative methods aiming to bridge the gaps or overcome the difficulties imposed by such oppositions. Other topics directly related to the core theme may also be considered.

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
