Deadline for manuscript  
submissions:

**closed (25 April 2024)**

### Message from the Guest Editors

Dear Colleagues,

The increased concern regarding the depletion of fossil fuels and the emanation of greenhouse gases necessitates the advancements of energy storage devices for the effective utilization of renewable energy sources. In this scenario, high-performance energy storage devices (batteries and supercapacitors) are the best candidates to tackle the present and future energy crises. Although supercapacitors deliver less specific energy than batteries, they are unavoidable in practical applications, especially in hybrid electric vehicles and electronic gadgets.

Unprecedented strategies need to be developed to boost the specific energy of supercapacitors. The main focus should be centered on their important components, namely, active electrode materials, separators, and electrolytes. Further, an in-depth understanding of electrode kinetics and the various factors influencing their overall performance is crucial to achieving a higher efficiency of energy storage and its utilization. With this in mind, this Special Issue is designed to compile recent advancements in the field of high-performance supercapacitors for next-generation energy applications.

## Editor-in-Chief

### **Prof. Dr. Andreas Jossen**

Institute for Electrical Energy  
Storage Technology (EES),  
Technical University München  
(TUM), Arcisstrasse 21, 80333  
Munich, Germany

## Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

## Author Benefits

**Open Access:**— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [Ei Compendex](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Electrochemistry*) / CiteScore - Q2 (*Electrochemistry*)
