Message from the Guest Editor

In recent years, rechargeable aqueous zinc-ion batteries (RAZIBs) have received incremental attention as a divalent-ion-based battery because of the advantages of using zinc, such as safety, natural abundance, cost effectiveness, environmental friendliness, high volumetric capacity, and ease of handling in air. Research on aqueous zinc-ion batteries will continue to grow, and is gaining importance for other applications, e.g., large scale energy storage systems.

Despite recent advances in RAZIB technology, new discoveries and further improvements are still required in the fields of high-energy electrode materials, electrolytes and salts, cell design, various scale test, battery management systems, and safety. Therefore, this Special Issue will focus on the future directions of developments in RAZIBs.

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Inspec](#), [CAPus / SciFinder](#), and many [other databases](#).

Journal Rank: [CiteScore](#) - Q1 (*Energy Engineering and Power Technology*)
