Redox Flow Batteries for Large-Scale Energy Storage

Message from the Guest Editors

Dear Colleagues,

Renewable energy sources such as solar and wind power have shown great promise to relieve the dependence on fossil fuels, thereby achieving a low-carbon society. However, due to the intermittent nature of renewables, the power generated cannot provide stable and consistent power delivery. Thus, energy storage technologies, battery technologies in particular, are needed to address the challenges associated with modernizing the power grid. Amongst different battery technologies, flow batteries are regarded as the most promising candidates for large-scale energy storage systems, offering long hours of storage capacity.

This vision has driven intensive research into the development of flow battery technologies that combine performance and cost merits. In addition, the exploration of suitable battery management and control strategies is also key to enhancing the safety, reliability, and cost efficiency of the battery system...

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Author Benefits

Open Access: - free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science) and Inspec (IET) from Vol. 3. To be indexed in Scopus from Vol. 5 (2019).

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 21.1 days after submission; acceptance to publication is undertaken in 7.3 days (median values for papers published in this journal in the second half of 2019).
