Special Issue

Lithium-Ion Batteries and Li-Ion Capacitors: From Fundamentals to Practical Applications: 2nd Edition

Message from the Guest Editor

As the representatives of energy and power devices, lithium-ion batteries (LIBs) and lithium-ion capacitors (LICs) have developed rapidly in recent years. LIBs have in fact become the first choice for new energy vehicles, 3C electronic products, and electrochemical energy storage. Due to their high power density, energy density, and long cycle life, the application of LICs in automotive energy recovery, electrochemical energy storage and power assistance, fast charging, and high functional devices could be promising. However, many problems remain unsolved in the basic research and application of LIBs and LICs, including increases in the capacity, rate, and lifespan of electrode materials; the increase in the ion transmission and storage capacity of anodes and cathodes; and the improvement of the electrode/electrolyte interface and stability of SEI. On the other hand, advances related to the surface density of electrodes and the proportion of active substances have become key issues in the research of lithium-ion batteries and lithium-ion capacitors.

About the Journal

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Editor-in-Chief

Prof. Dr. Karim Zaghib
Department of Chemical and Materials Engineering, Concordia University, Montréal, QC H3G 1M8, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
