

## Special Issue

# Aircraft Battery Technologies and Numerical Models

### Message from the Guest Editor

The development of all electric, more electric and hybrid electric propulsion systems in aircraft calls for energy storage systems with very strong requirements in terms of gravimetric and volumetric energy density, power density, sustainable temperatures, safety, cost, etc. The scope of this Special Issue is to bring together the developers of advanced powertrains and specialists in electrochemical technologies in order to summarize the state of the art and delineate future scenarios for electric aircraft propulsion. Another scope of the issue is to compare modeling approaches for evaluating the endurance, range and performance of aircraft equipped with advanced power systems.

---

### Guest Editor

Dr. Teresa Donateo

Department of Engineering for Innovation, University of Salento, 73100 Lecce, LE, Italy

## About the Journal

### Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
