

Special Issue

Material Design and Development for Redox Flow Batteries II

Message from the Guest Editor

Renewable resources, such as wind and solar, are becoming competitive technologies with a steady increase in production volume and decrease in energy generation costs. The problems associated with the intermittency and the fluctuating nature of renewables increasingly threaten the stability of the electricity grid. Redox flow batteries (RFBs), which are essentially rechargeable batteries with electroactive chemicals dissolved in solutions, offer a way to store excess energy at varying scales. A serious current challenge is the discovery and development of key material components for the advancement of RFB technologies. In this Special Issue of Batteries, we invite both fundamental and applied research articles and reviews addressing issues related to the development or application of RFB active materials, electrodes, electrolytes, catalysts, membranes, modeling and characterization techniques.

About the Journal

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Editor-in-Chief

Prof. Dr. Karim Zaghib

Department of Chemical and Materials Engineering, Concordia
University, Montréal, QC H3G 1M8, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
