Sustainable Lithium Ion Batteries: From Production to Recycling

Message from the Guest Editor

Electric vehicles (EV) are promoted as a sustainable transportation choice because, on a life-cycle basis, they emit fewer greenhouse gases than conventional vehicles. In the evaluation of EV contributions to sustainable transportation, however, it is important to consider the production of the battery and its contribution to environmental impacts beyond life-cycle greenhouse gas emissions and urban air pollutant emissions. These impacts can be mitigated through use of different materials in batteries that incur less environmental impacts in the supply chain of batteries. Furthermore, battery recycling poses an opportunity to reduce demand for newly-mined metals. Contributions to this issue will investigate environmental impacts of today's lithium-ion batteries, how emerging battery chemistries might reduce battery environmental impact, and how opportunities for metal recovery through battery recycling can reduce demand for newly-mined metals.

About the Journal

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Editor-in-Chief

Prof. Dr. Karim Zaghib
Department of Chemical and Materials Engineering, Concordia
University, Montréal, QC H3G 1M8, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
