

Special Issue

Redox Flow Batteries and Hydrogen Technologies for Large-Scale and Long-Duration Energy Storage Applications

Message from the Guest Editors

Redox flow batteries as a novel and intrinsically safe energy storage technology have the characteristics of long charge and discharge cycle life, recyclable electrolyte, good life cycle economy and environmental friendliness, which has received widespread attention from academia and industry. In response to the major demand for high-security, large-scale stationary electrochemical energy storage technology such as new power systems, it is necessary to increase the research and development of key technologies for new generation flow batteries in the future, break through the key scientific and technical challenges in new technologies, and solve the problems of aqueous flow batteries. Flow battery technology faces problems such as scale, cost, and lifespan, to achieve the orderly and healthy development of the entire flow battery industry chain and provide technical support for the energy revolution and energy structure adjustment. This Special Issue focuses on technologies of redox flow batteries, such as novel ion exchange membranes, modified carbon fiber electrodes, and newly designed electrolytes (aqueous/non-aqueous/organic).

About the Journal

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Editor-in-Chief

Prof. Dr. Karim Zaghib

Department of Chemical and Materials Engineering, Concordia
University, Montréal, QC H3G 1M8, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
