Special Issue

2D Materials for Electrochemical Energy Storage and Conversion

Message from the Guest Editors

This Special Issue will cover various aspects of the technology, engineering and applications demonstrating significant advances of two-dimensional materials in energy research. Since graphene was first experimentally isolated in 2004, innumerable other 2D materials such as transition metal oxides, transition metal carbides/nitrides (MXenes), dichalcogenides etc. have been increasingly investigated. The salient properties of these materials, including electrical conductivity, redox potential, and high packing density, as well as their surface chemistry (e.g., electrocatalytic activity and polarity), are unparalleled, offering them potential roles in electrochemical energy storage and conversion. Therefore, these 2D materials and their composites can be extensively exploited for electrochemical energy storage (supercapacitors, batteries, etc.) and energy conversion (fuel cells, thermoelectric devices, etc.). This Special Issue is focused on recent and innovative research articles forecasting the extraordinary potential of emerging 2D materials in energy-related applications, and will be informative and useful for the readers.

Guest Editors

Dr. Maria Christy

Department of Energy Engineering, Hanyang University, Seoul 133-791, Republic of Korea

Dr. Zahoor Ul Hussain Awan

Department of Food Engineering, NED University of Engineering and Technology, Karachi, Pakistan

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Editor-in-Chief

Prof. Dr. Karim Zaghib
Department of Chemical and Materials Engineering, Concordia University, Montréal, QC H3G 1M8, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q1 (Electrical and Electronic Engineering)
