Deadline for manuscript
submissions:

16 October 2024

Message from the Guest Editors

The aim of this Special Issue is to select a representative set of empirical articles that attempt to shed light on how **culture (including social and physical environments)** impacts **children's everyday experiences**. The articles can take a multidisciplinary perspective (**psychology, education, anthropology, and cognitive neuroscience**), address various aspects of **development (language, social, emotional, cognitive, moral, and prosocial development, as well as academic achievement)**, and various **environmental factors (e.g., parenting, community practices, education, accessing services, etc.)**.

We welcome all submissions related to the above-mentioned topics from various underserved communities around the world with particular attention paid to BILPOC communities (Black Indigenous Latinx and People of Color).

Keywords :

cultural psychology

social context

environmental influences

child development

BILPOC communities
