Psychosocial Factors and Risk Behavior among Minority Populations

Message from the Guest Editor

Psychosocial factors influence us psychologically and socially as we move throughout our social environment, shaping our behavior. As minority and low-socioeconomic populations bear the burden of poor social and health outcomes within our global society, risky decision making for these populations may have greater impacts on morbidity, mortality, and/or quality of life. There is a need for more research focused on the relationships between risk behavior and psychosocial factors such as cultural beliefs, attitudes, norms, social support, hopelessness, stress, autonomy, etc. Many psychosocial theories of human behavior and decision making allow further investigation with respect to their application to diverse populations and high-risk behaviors. This Special Issue explores issues with an eye toward fostering a global culture of health. Theoretical applications and interdisciplinary approaches that address psychosocial factors and their influence on risk behavior among minority populations are also encouraged.

About the Journal

Message from the Editor-in-Chief

With warm greetings, it is a pleasure to invite you to contribute a research article or comprehensive review for consideration and publication in *Behavioral Sciences*. *Behavioral Sciences* is an international, scientific, open access journal providing an advanced forum for discussions and research regarding the intersection between psychiatry, neuroscience, psychology, cognitive and behavioral sciences, and behavioral biology. More information are available at: <https://www.mdpi.com/journal/behavsci>. We would be pleased to welcome you as one of our authors and have the opportunity to consider your work for publication.
