

Special Issue

Burnout and the Quality of Personal, Working and Social Life

Message from the Guest Editors

Burnout as a work-related phenomenon involving emotional exhaustion, depersonalization, and a sense of reduced personal accomplishment. Many persons are at high risk of developing burnout syndrome, and scientific data have shown that individual factors are important, e.g., gender, marital status, parental tasks, chronic disease or psychological traits. The scientific literature presents the meaning of the concept balancing between a medical diagnosis and a social stigma. However, burnout syndrome is a common and widespread phenomenon. This Special Issue is addressed to researchers and academics interested in presenting theoretical and practical research on the topic of burnout: causes, consequences, interventions. We invite articles, reviews, and meta-analyses on the topic of burnout from various areas: medicine, education, psychology, psychotherapy, counselling, human resources, ethics, social policy or wellbeing.

About the Journal

Message from the Editor-in-Chief

With warm greetings, it is a pleasure to invite you to contribute a research article or comprehensive review for consideration and publication in *Behavioral Sciences*. *Behavioral Sciences* is an international, scientific, open access journal providing an advanced forum for discussions and research regarding the intersection between psychiatry, neuroscience, psychology, cognitive and behavioral sciences, and behavioral biology. More information are available at: <https://www.mdpi.com/journal/behavsci>. We would be pleased to welcome you as one of our authors and have the opportunity to consider your work for publication.

Editor-in-Chief

Prof. Dr. Jerrell Cassady

Department of Educational Psychology, Ball State University, Muncie, IN
