Paving the Path to Well-Being Through Human Behavior Analysis with Data Science

Message from the Guest Editors

This Special Issue deals with well-being in relation to quality of work, self-actualization, recreation, exercise, and mindfulness, using various frameworks and datasets, to focus on the structural aspects of human behavior analysis, encouraging the use of modern metrics and methodologies, such as structural equation modeling (SEM), network analysis, large-scale data analysis and artificial intelligence (AI), to explore the intricate relationships between various behavioral factors and well-being outcomes.

Topics of Interest: 1) Applications of structural equation modeling in well-being research; 2) Network analysis of social behaviors and their impact on well-being; 3) AI-driven approaches to predicting and enhancing well-being; 4) Case studies demonstrating the integration of data science and behavioral analysis; 5) Scientometric approach to well-being research advancements; 6) Methodological advancements in the measurement and analysis of well-being; 7) Cross-cultural studies on well-being using data science techniques.
