

Special Issue

Psycho-Affective Processes and Their Role in Development, Learning, and Well-Being Throughout Life

Message from the Guest Editor

Psycho-affective processes are essential in determining how people learn, grow, and feel throughout their lives. Important facets of functioning, including social interactions, emotional control, cognitive development, and general resilience, are influenced by these processes. From the early development of attachment in childhood to the preservation of emotional equilibrium and mental well-being in later adulthood, their influence extends throughout all phases of life. The **Special Issue** welcome original research and reviews that examine the following topics: The mechanisms linking psycho-affective processes to cognitive, emotional, and social development; The role of emotional regulation in learning and resilience across the human lifespan; Interventions designed to promote well-being and mitigate risks in vulnerable populations; Longitudinal studies and meta-analyses that capture developmental patterns and critical transitions.

Guest Editor

Dr. Adrian Paterna

Psychology Department, Universidad de Valladolid, Valladolid, Spain

Deadline for manuscript submissions

30 December 2025
