The Effects of Natural Environments on Human Health

Message from the Guest Editor

Dear Colleagues: We welcome submissions of papers involved in developing a better understanding of the relationship between natural environments and human health. We take a broad perspective of what constitutes human health and have moved past the more traditional “absence of disease” connotation to include an individual’s holistic well-being. Likewise, we take a more comprehensive view of natural environments to include areas and landscapes that contain a variety of factors associated with the natural world. Thus, submissions focusing on the ways of connecting individuals to nature and digital and technologically-enabled environments are both welcome. Specific examples of topics include: historical connections between health and natural environments; health benefits and outcomes from the nature experience; sense of place in natural settings; urban and municipal natural landscapes and their contributions to health; negative health effects from natural environments; physical, psychological, neurological, cognitive, and behavioral effects from spending time in nature; physical activity in natural settings, etc. *Guest*

Author Benefits

High Visibility:

*indexed within Scopus, SSCI (Web of Science), PubMed,
PMC, PsycInfo, and other databases.*

Journal Rank:

*JCR - Q2 (Psychology, Multidisciplinary) / CiteScore - Q2
(Development)*

Rapid Publication:

*manuscripts are peer-reviewed and a first decision is
provided to authors approximately 28.7 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the second half of 2024).*
