Special Issue

Behavioral and Psychological Intervention for Long Term Health Conditions

Message from the Guest Editor

This Special Issue aims to address this gap in the literature and advance the understanding of behavior change interventions for people with long-term health conditions. We are seeking articles that will enhance knowledge across the intersections of behavior change interventions, from the development, implementation, evaluation, and evidence to their translation in policy and practice. This Special Issue will provide a comprehensive library of research evidence that will advance our current understanding and knowledge of replicable ways to improve health behavior change interventions. It will also provide a description of the factors and the mechanisms of behavioral and psychological interventions that underpin and impact outcomes related to long-term health conditions. For more information, please visit Special Issue "**Behavioral and Psychological Intervention for Long Term Health Conditions**".
