## Advances in Resilience Psychology

### Message from the Guest Editor

Resilience involves responding to challenges in ways that foster adaptation and coping. Important early resilience research explored individual traits that were found to contribute to building resilience. Recent research in resilience has built upon these findings to explore how sociocultural contexts support resilience. This Special Issue on *Advances in Resilience Psychology* is committed to exploring community-based interventions, government programs, therapeutic techniques, teaching approaches, outreach, advocacy, education, social media considerations, school-based support, and community/governmental partnerships that can strengthen resilience from a broad sociocultural, community-based perspective. In so doing, this Special Issue seeks to address the complex global problems related to levels of resilience, including, but not limited to, poverty, trauma, immigration, forced displacement, healthcare/mental healthcare access, government reform, disempowerment, advocacy, prevention efforts, public policy, and freedom.
