

Special Issue

Early Identification and Intervention of Autism

Message from the Guest Editors

Early intervention is critical for improving long-term outcomes for young children on the autism spectrum. Intervention for autism initiated at earlier ages improves children's long-term cognition, communication, behavior, and development. Additionally, including caregivers in early intervention delivery bolsters child and family gains. Given the strong empirical support for early intervention in autism, a growing number of research studies have been focused on strategies to improve the implementation of early autism interventions in community settings, especially those serving children from marginalized backgrounds. Therefore, this current Special Issue of Behavioral Sciences welcomes original research, systematic reviews, conceptual and theoretical research, applied effectiveness research, and implementation research focused on early intervention for autism when delivered in community settings.

About the Journal

Message from the Editorial Board

Editors-in-Chief

Prof. Dr. Gianluca Serafini

Department of Neuroscience, Rehabilitation, Ophthalmology, Genetics, Maternal and Child Health (DINO GMI), Section of Psychiatry, University of Genoa, 16132 Genoa, Italy

Prof. Dr. Jerrell Cassady

Department of Educational Psychology, Ball State University, Muncie, IN 47306, USA

Author Benefits

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubMed, PMC, PsycInfo, and other databases.

Journal Rank:

JCR - Q2 (Psychology, Multidisciplinary) / CiteScore - Q2 (Development)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 28.7 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2024).
