Approaches That Enable Analytical Generalization in Psychological and Sociological Research

Message from the Guest Editor

It is essential that research is promoted that is able to create, innovate, and challenge current thinking in psychological and sociological studies. Example methodologies that are able to achieve this include different forms of grounded theory as well as recently developed review types. An example of a type of grounded theory could be the social constructivist grounded theory, which employs qualitative interviews as a way to developing ideas and analytical understanding through methods like constant comparisons where analyses slowly become more abstract. A type of review that has the ability to generate theories could be a social constructivist meta-ethnography. However, this Special Issue encourages different methodologies, methods, and approaches. This [Special Issue](#) is focused on approaches that have been applied across different groups or populations. The articles for this Special Issue will only be included if they propose a novel process, model, or theory.

About the Journal

Message from the Editor-in-Chief

With warm greetings, it is a pleasure to invite you to contribute a research article or comprehensive review for consideration and publication in *Behavioral Sciences*. *Behavioral Sciences* is an international, scientific, open access journal providing an advanced forum for discussions and research regarding the intersection between psychiatry, neuroscience, psychology, cognitive and behavioral sciences, and behavioral biology. More information are available at: <https://www.mdpi.com/journal/behavsci>. We would be pleased to welcome you as one of our authors and have the opportunity to consider your work for publication.

Editor-in-Chief

Prof. Dr. Jerrell Cassady
