The Multiple Facets of Epilepsy

Message from the Guest Editors

Epilepsy is a group of neurological disorders characterized by recurrent epileptic seizures due to abnormal electrical activity in the brain. It represents one of the most widespread chronic diseases, affecting about 50 million people worldwide. Epilepsy has numerous etiologies, some of which have yet to be fully elucidated. Seizures can produce a plethora of different clinical manifestations with a wide range of severities and varying impacts on individuals and their families. Moreover, regarding seizures, the complex phenotypes of people with epilepsy are often complicated by the presence of psychiatric and medical comorbidities. This Special Issue will collect new evidence about the genetic and environmental etiological factors of epilepsy, new diagnosis strategies, new developments in management and treatment, as well as innovative insights on the neuropsychological and cognitive implications of epilepsy. Therefore, I invite clinicians, researchers, psychologists, psychiatrists, neurologists, and pediatricians from different countries to contribute to this Special Issue in order to acquire new perspectives on the multiple facets of epilepsy.

Author Benefits

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubMed, PMC, PsycInfo, and other databases.

Journal Rank:

JCR - Q2 (Psychology, Multidisciplinary) / CiteScore - Q2
(Development)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.6 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the first half of 2025).
