Message from the Guest Editors

Dear Colleagues,

Beverage packaging uses several types of materials and components, including rigid and flexible plastics, paper and board, rigid metal, glass, closures, and labels. A variety of packaging types, such as bottles, cans, pouches, and cartons, are available, and this market is expected to continue growing.

We sincerely invite high-quality original research and review papers on both experimental and theoretical works addressing this topic:

Potential topics include, but are not limited to:

- Beverage packaging materials
- Filling technology
- Active and/or intelligent packaging concepts
- Beverage packaging sustainability
- Biopolymers for beverage packaging
- Recycling of beverage packaging
- Sensory properties of packed beverages
- Food law compliance testing
- Improved shelf-life of packed beverages
- Industry 4.0 in beverage packaging operations
- Beverage packaging process technology and process design
