closed (30 September 2018)

## Message from the Guest Editor

Dear Colleagues,

Mycotoxins are toxic compounds produced by fungi that contaminate food and raw materials. They can severely affect human health after chronic exposure and, thus, their presence at low concentrations is of great concern in food safety. This Special Issue comprises articles or reviews related to the presence of these toxins in beverages, the effects of beverage processing mycotoxin on contamination, the impact of their presence on human health, and analytical methodologies used for their determination in beverages. Due to the fact that cooccurrence of mycotoxins in a food is the most likely scenario, manuscripts devoted to this aspect are especially welcome

Prof. Dr. Elena González-Peñas *Guest Editor*
