Unraveling Healthy Beneficial Effects of Common and New Brand Developed Plant Beverages

Message from the Guest Editors

Non-alcoholic, non-dairy, plant-based beverages, such as fruit-, vegetable-, legume-, and cereal-based beverages, and coffee or tea, among others, comprise a growing segment of functional food development worldwide. They stand out due to their wide range of bioactive compounds comprising polyphenols, carotenoids, plant sterols, glucosinolates, and antioxidant vitamins with potential health benefits. New and advanced non-thermal processing technologies as well as fermentation may better preserve and even improve aspects of bioaccessibility and bioavailability in such beverages, which are important steps for their bioactivity. Thus, concerted efforts in applied research in functional beverages is required in the coming years to prepare tailor-made plant beverages with proven health-promoting effects. For this purpose, it is important to consider the evidence provided by mechanistic in vitro (test tube and pre-clinical models in cell cultures) and confirmatory in vivo (considering animal models and gold-standard human clinical trials) assays.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Edgar Chambers IV
Center for Sensory Analysis and Consumer Behavior, Kansas State
University, Manhattan, KS 66506, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), FSTA,
CAPlus / SciFinder, PubAg, and other databases.

Journal Rank:

CiteScore - Q2 (Food Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 24.1 days after
submission; acceptance to publication is undertaken in 6.6
days (median values for papers published in this journal in
the first half of 2025).
