

Special Issue

Omics and Beverages

Message from the Guest Editor

Beverages are consumed daily. Since many of these beverages have a biological origin, the omics-techniques can be utilized in a variety of ways to extract nutritional, biological and chemical information from the beverage. This information can be related to a number of factors important for both consumers and producers; safety, traceability, quality, etc.

We welcome papers focused on omics approaches to investigate beverages, including genomics, transcriptomics, proteomics and metabolomics. The combination of multiple omics-techniques (Foodomics) can possibly provide a more holistic and integrative approach. All these omics-techniques are considered important analytical tools that can help us understand the biology behind the raw material used for the beverage in question and how it has been processed, its response to environmental stimuli or to genetic perturbation, or storage conditions to name a few.

In this Special Issue we will recognize papers that expand the boundaries of our existing knowledge in the field, including truly omics-studies, but also papers that report on characterization of novel beverages or on the process of novel technologies for beverage production.

Guest Editor

Dr. Ulrik Kræmer Sundekilde

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Edgar Chambers IV
Center for Sensory Analysis and Consumer Behavior, Kansas State
University, Manhattan, KS 66506, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), FSTA,
CAPlus / SciFinder, PubAg, and other databases.

Journal Rank:

CiteScore - Q2 (Food Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 24.1 days after
submission; acceptance to publication is undertaken in 6.6
days (median values for papers published in this journal in
the first half of 2025).
