Message from the Guest Editors

In recent decades, wearable technologies have been through exceptional improvements, which has allowed researchers to develop small size, lightweight, low power consumption devices at affordable cost, with the possibility to collect data on-board for long periods of time. Due to these characteristics, and to the fact that wearable sensors are mostly unobtrusive for workers, they gained significant popularity in the ergonomics context, where they are usually employed to assess various type of parameters associated with the development of occupational musculoskeletal disorders.

In this context, the aim of this collection is to gather contributions that are useful to better delineate benefits and criticalities of wearable technologies in their various forms for the continuous assessment of biomechanical risk factors in actual working environments where the development of occupational musculoskeletal disorders represents a critical issue.

This collection welcomes original research articles and systematic reviews focused on the use of wearable sensor and related data processing techniques for the continuous assessment of biomechanical risk factors in actual working environments.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPlus / SciFinder](#), [Inspec](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Engineering, Biomedical*)
