Message from the Guest Editors

This Special Issue “Advances in Computational Modelling of Abdominal Aortic Aneurysm” will focus on the computational methods used to study the hemodynamic and biomechanical variables that develop inside AAAs and identify possible correlations with the risk of rupture. The maximum diameter criterion that is currently used as the main determinant of rupture and, therefore, the need for intervention, was proven to be inadequate for accurate rupture risk prediction at a patient-specific level. Numerical simulations can provide an insight into the physiology and pathophysiology of these lesions and possibly assist in the delineation of their natural history. The individualized characteristics of AAAs may further define the risk of rupture beyond the universal maximum diameter criterion. Moreover, the treatment of AAAs with open surgical or endovascular techniques may present a variable hemodynamic performance with various configurations, each one presenting specific advantages and disadvantages. Computational modelling can be employed to study these treatment modalities to provide insight into their comparative efficacy and, in this regard, guide clinical practice.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPus / SciFinder](#), [Inspec](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Engineering, Biomedical*)
