Message from the Guest Editors

As highlighted by the current pandemic, damage to the lung during infectious disease can lead to significant mortality. In addition, the ability of the lung to recover from injury is critical for survival, and abnormal repair can lead to additional complications, such as fibrosis and increased susceptibility to additional insults. The lung is a dynamic and mechanosensitive organ composed of a variety of structural cells, such as epithelial cells, endothelial cells, and fibroblasts, as well as immunological cells (such as macrophages). This Special Issue on “Macrophage, Inflammation and Lung Disease” will focus on original research papers and comprehensive reviews, addressing the complex cellular and micro-environmental interactions that occur within the lung in the setting of a) normal health; b) acute and chronic lung disease; and c) during lung repair and resolution.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPlus / SciFinder](#), [Inspec](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Engineering, Biomedical*)
