Prof. Dr. Luca Luiselli

Institute for Development Ecology Conservation and Cooperation Via G. Tomasi di Lampedusa 33 I, 00144 Rome, Italy

Deadline for manuscript submissions:

closed (1 June 2024)

Message from the Guest Editors

Freshwater turtles are among the most ancient vertebrates on Earth. As for other chelonians, their body plan persisted with little change for more than 200 million years and their distribution spans across rivers of all continents, from equatorial up to temperate biomes. Nearly one third of all chelonians (353 spp.) is represented by taxa with a distinct adaptation to freshwater habitats. Hunting for turtle egg and meat, accompanied by the poor status of the world's rivers and wetlands, habitat destruction, and climate change, imply that freshwater turtles are the most threatened vertebrates on Earth; a majority is classified as threatened, and a significant but poorly assessed number of species, starting from Asiatic taxa, are at the brink of extinction.

Recent decades have witnessed significant advancements in the understanding of turtle distribution, ecology and conservation status. Yet wide gaps persist. Next to this, recent advancements have enhanced our knowledge on fascinating aspects of the physiology of these weird organisms, including their ontogeny, breathing, reproduction and senescence (or rather lack thereof).

Institute, University of Valencia
and CSIC, 46980 Valencia, Spain

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)
