Immune Microenvironment and Molecular Mechanism of Glioma

Message from the Guest Editor

Gliomas are the most common malignant primary brain tumors in adults. Conventionally, gliomas have been classified based on their histology by immunohistochemistry methods. However, in 2016, the World Health Organization (WHO) introduced molecular markers in its classification, enabling a more accurate description and prognosis for these tumors according to their molecular characteristics. More recently, cancer immunotherapy, which has shown impressive results in the treatment of extracranial tumor types, is now being used for glioblastomas (GBM; WHO grade IV) treatment. However, disappointing outcomes of clinical studies involving immunotherapy treatment exposed the need for new approaches against GBM. Furthermore, GBM's microenvironment is rich in immunosuppressive factors, such as cytokines like transforming growth factor- β and IL-10, which can polarize immune cells into a regulatory profile, thus contributing to tumor growth. This Special Issue will focus on original papers covering topics related to "Immune Microenvironment and Molecular Mechanism of Glioma" that present advances in those fields.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
