# Lysosomes and Diseases Associated with Its Dysfunction

#### Message from the Guest Editor

Lysosomes are metabolic sensors and play a key role in the regulation of metabolism. As degradative organelles, the catabolic function of lysosomes is accomplished by hydrolases, lipases, nucleases and proteases. Metabolites (nucleotides, amino acids) sugars, lipids) generated by lysosomal degradation are exported to the cytoplasm to be reused. Moreover, lysosomes have the ability to tether with other membrane organelles, including endoplasmic reticulum and mitochondria, to coordinate the cellular metabolic response. Abnormalities in endosomes and lysosomes or dysregulation in their trafficking could be associated with various disorders. This Special Issue welcomes original research relating to this theme in the field of biology and biomedicine. Reviews describing signalling pathways and methodology articles highlighting recommendations and cautions for the study and characterization of these organelles are also welcome.

#### Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

#### **Editors-in-Chief**

#### Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

#### Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

#### **Author Benefits**

#### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

#### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
