Special Issue

Alternative Splicing: From Dissection of Molecular Mechanisms to Development of New Therapeutic Tools

Message from the Guest Editor

Almost all transcribed human genes undergo alternative RNA splicing, which allows the cells to expand the diversity of the coding and non-coding cellular landscape. Alternative splicing is regulated by cis-elements located in the affected gene and trans-splicing factors that are usually cell type specific. Moreover, an extra layer of complexity is related to the interplay among splicing, transcription, and chromatin remodeling processes. The resultant gene products might have distinctly different and, in some cases, even opposite functions. Although our knowledge of splicing is advancing, efforts are still required to dissect the specific molecular mechanims involved in both normal and pathological conditions for the development of innovative molecules for therapeutic purposes. In this context, research has developed a broad spectrum of therapeutic tools to modulate splicing, including AON, engineered UsnRNA, RNA editing, trans-splicing molecules, chemical splicing factors, and so on. Overall, there is strong interest in the dissection of splicing mechanisms in normal and pathological conditions, which will lay the foundation for the development of new therapeutic options.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne
Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya
Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
