10th Anniversary of Biology: Amyloid Interaction in Regulation of Protein Function, Prion Propagation, and Cell Death

Message from the Guest Editor

Amyloid aggregation has been involved in severe neurodegenerative disease as well as in the regulation of cell functions. Physical properties of amyloid fibrils are useful for natural biofilms and are utilized for artificial nanotube elaboration. However, they also form membrane pores leading to cellular lysis. How can amyloid proteins govern cell viability through hydrophobic interactions, and how do cells deal with the formation of toxic aggregates? These are the questions that this review series aims to answer. Several aspects of amyloid aggregation, such as structural characterizations, the spread of yeast prions, cellular necroptosis, and neurodegeneration, will be examined. Recent interest in anti-prion systems (such as chemical or natural chaperones) and in the viral ability to block necroptosis by targeting amyloid interaction will add a therapeutic perspective to this series.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
