Factors Affecting In Vitro Assessment of Sperm Quality

Message from the Guest Editors

The study of the different in vitro sperm parameters is essential to evaluate sperm quality, to predict the fertilizing potential of semen samples and to detect male infertility. These aspects are important in the development of Assisted Reproduction Technologies (IVF, ICSI) in human, the application of artificial insemination in livestock species, the conservation of animal biodiversity and in the study of factors with possible effect on male fertility. The combination of different procedures of sperm evaluation, mainly flow cytometry and computer-assisted sperm analysis (CASA), as well as obtaining new knowledge about sperm parameters, could improve this predictive ability. Flow cytometry and CASA systems allow to objectively assess a high number of cells and parameters in a short period of time. This special issue will focus on the most used and advanced in vitro methodologies to evaluate sperm quality for its application in the preservation of seminal doses and the prediction of semen and male fertility in different animal groups, such as mammals, birds, fishes or insects.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
