

## Special Issue

# Human Experimental Models in Molecular Pharmacology

### Message from the Guest Editor

This Special Issue will feature the latest scientific research in the development of human experimental models or the improvement of their utility in one of the most rapidly growing fields of molecular pharmacology, which investigates the molecular mode of drug action using genetic and molecular biology methods. We aim to outline the usefulness, caveats, and potential of human experimental models. Therefore, humanized animal models or human clinical studies will not be considered for publication in this Special Issue. We encourage the submission of manuscripts that report significant advances in human experimental models, with a special focus on the molecular level, in drug research.

## About the Journal

### Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
