Managing Hybridizing Populations: Threats or Opportunities for Conservation?

Message from the Guest Editors

Natural hybridization is a driver of evolution while anthropogenic hybridization is considered a risk factor for biodiversity conservation. However, new research findings challenge these assumptions. Conservation biology needs innovative guidelines for the protection of hybridizing endangered species and for upholding the evolutionary dynamics of admixing populations.

In this Symposium, we will provide reports on ongoing research projects and updated conservation strategies for animal populations that are evolving due to natural or anthropogenic hybridization and gene introgression. Aims of this Symposium is to promote a positive conservation view, which accounts for biodiversity inclusively: and also inclusive of hybridization, e.g., biodiversity of hybridizing populations. Therefore, the formulation of conservation solutions requires (1) scientific research and in-depth analysis of case studies involving hybridization, (2) debating of any findings by academics and all conservation stakeholders, and (3) the development of monitoring and management procedures applicable in the real world of conservation, a world that is perhaps inclusive towards hybrids.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
