Special Issue

Plant-Pathogen Interaction 2.0

Message from the Guest Editors

Plant pathogens cause severe loss in natural plant systems, as well as in terms of economics and production in the agriculture systems. While many biotic constraints are well known, and confronted with variable success, the occurrence of emerging pathogens and the progressive incidence of novel virulent strains, races or pathotypes are evident. Moreover, the practicability of some of the currently available crop protection measures is questioned. Understanding how pathogens adopt an appropriate adaptive mechanism during plant infection, as well as the exploitation of the diversity of mechanisms that plants process to control the resistance/susceptibility to plant diseases, will aid in the conserving of nature and ecosystem services and is also of benefit for agriculture and forestry. The identification of regulatory components involved in the processes will be of major importance for sustainable plant–disease management. Knowledge of plant–pathogen interactions could aid in the prevention of disease in plants, which would be beneficial to agricultural production and to global food security

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne
Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya
Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
