

## Special Issue

# Advances in Plant Taxonomy and Systematics

### Message from the Guest Editor

As a consequence of increasing systematic knowledge, the scientific names of plants often change. While since about 15 years ago family-level circumscriptions became stable, species are often recombined under different genera or synonymized with others. This is perceived by taxonomy users, either in the scientific community or in wider society, as a relevant and often not understood problem. In general, and still today, it is much easier to describe a new species than to definitely prove that it is not worthy of recognition on systematic grounds. This is resulting in worldwide taxonomic inflation, which is also causing inconsistencies in conservation biology. This problem could be superseded only by adopting extreme caution before describing new taxa and, above all, by adopting integrated approaches to taxonomy. Finally, another topic which is becoming more and more important, related to floristics, concerns the free availability of verified and reliable primary biodiversity data.

We propose in this Special Issue to highlight the state of the art of current taxonomic and systematic research as well as its fundamental contribution to plant science and biology in general.

## About the Journal

### Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
