

## Special Issue

# Transcriptome and Genome Analyses Applied to Aquaculture Research

### Message from the Guest Editor

The lowering cost of the next-generation sequencing (NGS) strategies in recent years has allowed the genome sequencing of numerous fish and shellfish species with relevance in the aquaculture industry. This represents an important tool for geneticists, since the availability of whole genomes facilitates the search for genetic markers or genes associated with different traits of interest. Massive transcriptome analyses have also become indispensable to study different questions of interest (nutrition, growth, disease resistance, reproduction, etc.) but, in addition to the study of the mRNA expression, the role of the non-coding RNAs (especially miRNAs and lncRNAs) in these aspects has received reached great interest in the last few years. Moreover, the study of the epigenome and the implications of epigenetic modification under certain conditions is being rapidly expanded to aquaculture research. This Special Issue welcomes papers on the genomics, epigenomics, and transcriptomics of fish and shellfish species of interest in aquaculture. Manuscripts focusing on high-throughput methodologies will be appreciated.

### Guest Editor

Dr. Patricia Pereiro

Immunology and Genomics Group, Institute of Marine Research,  
Eduardo Cabello 6, 36208 Vigo, Spain

### Deadline for manuscript submissions

closed (30 April 2022)

## About the Journal

### Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
