Special Issue

Pathogenesis and Immune Evasion of Mycobacteria in Mammals

Message from the Guest Editors

Mycobacteria encompass a diverse group of pathogens capable of infecting a wide range of mammalian hosts. Their success as pathogens lies in their remarkable ability to persist within host tissues, often establishing chronic or latent infections. Species such as Mycobacterium tuberculosis and Mycobacterium bovis have evolved sophisticated mechanisms to subvert host immune responses, enabling survival within macrophages, evasion of bactericidal pathways, and modulation of adaptive immunity. These strategies contribute not only to disease progression and transmission but also to major challenges in vaccine development and therapeutic interventions. Understanding the molecular and cellular basis of mycobacterial pathogenesis and immune evasion is crucial to improving diagnostics, vaccines, and hostdirected therapies. This Special Issue aims to bring together cutting-edge research on the pathogenic strategies of mycobacteria and their interactions with mammalian immune systems. We welcome contributions spanning molecular mechanisms, hostpathogen interactions, animal models, and translational research to advance our understanding and inform future control strategies.

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
