Molecular Genetics in Plant Responses to Abiotic Stress

Message from the Guest Editors

Abiotic stresses such as heat, drought and salinity present a great threat to global crop production and food security. Stressful conditions interfere with normal growth and development of plants. Crop yields and quality of the produce reduce significantly under exposure to abiotic stress conditions due to adjustments in plant's molecular, physiological and biochemical processes. Climate change has increased the intensity, frequency and duration of extreme weather events in recent times. Plants have evolved acclimation mechanisms to cope with abiotic stress challenges. These acclimation mechanisms involve receiving the stress signals and then communicating these signals to the other tissues. Advances in genetic technologies in combination with the availability of multi-omics datasets and high-throughput phenotyping measurements have contributed to improving the understanding of plant abiotic stress response. In this Special Issue, we invite high-quality research work including original research articles and reviews related to genetics and multi-omics aspects of plant abiotic stress responses.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
