

Special Issue

The Impact of Climate Change on Quality, Yield, and Nutritional Properties of Cereals, Legumes, and Oilseeds

Message from the Guest Editor

Climate change poses a significant threat to global food security and nutrition. Rising temperatures, altered precipitation patterns, increased salinity, and elevated atmospheric CO₂ levels can have profound effects on the yield, quality, and nutritional composition of major crop species, including cereals, legumes, and oilseeds. These crops are vital sources of calories, proteins, essential nutrients, and healthy fats for human consumption and animal feed. Understanding the impact of climate change factors on these crops is crucial for developing adaptation and mitigation strategies to ensure food and nutritional security in the face of a changing climate. This Special Issue aims to bring together the latest research on the effects of climate change stressors on the quality, yield, and nutritional properties of cereals, legumes, and oilseeds, as well as approaches to enhance their resilience and productivity under future climate scenarios.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
