Message from the Guest Editor

In the field of CNS traumatic injury, several areas linked to the care of the patients have evolved from the diagnosis point to medical and surgical care. The introduction of biomarkers and new technological devices for better selection of the most critical patients has shown a trend towards more precise treatment pathways.

Additionally, recent clinical studies, involving medical and surgical therapies, have also shown which interventions definitively work or not and how they can be managed in different contexts.

This linear process seems straightforward, but we all know how many barriers can be met in the scientific process. Issues related to methodological designs, selection bias and difficulties with the preclinical models can be associated with different impacts over the results.

The aim of this Special Issue is to provide an opportunity to share different kinds of primary and secondary studies where all these aspects of the translation of science could be highlighted with the focus of very deep and detailed messages to take home for scientists dedicated to the care of these patients worldwide, in different settings and with different levels of resource availability.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within *Scopus*, *SCIE (Web of Science)*, *PubMed*, *PMC*, *CAPLus / SciFinder*, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Medicine (miscellaneous))
