Message from the Guest Editors

Dear Colleagues,

Animal models are powerful tools for investigating the key principles and underlying mechanisms of diseases and disorders. The use of animal models has allowed us to conduct various types of experiments and interrogate the mechanisms underlying diseases and disorders in manners that are unfeasible and unthinkable to apply to human patients. To date, various mammalian and non-mammalian animal models of neurological disorders have been established and characterized. They reflect the genetics, behavioral, and/or electrophysiological phenotypes of human patients. There are various neurological disorders but, in this issue, we are focusing on five prominent disorders: Parkinson's disease, Alzheimer's disease, epilepsy, Huntington's disease, and schizophrenia. This Special Issue will provide experimental evidence, updated views, and new treatment strategies regarding these disorders. Critical discussions on the advantages and limitations of animal models used to mirror these neurological disorders are also welcome.

Prof. Dr. Marc Ekker

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPUS / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q2 (*Medicine (miscellaneous)*)
