Special Issue

Neutrophil Extracellular Traps (NETs) in Immunity

Message from the Guest Editor

The discovery of neutrophil extracellular traps (NETs) as a part of the central element of the innate immune response raised a number of questions regarding this phenomenon, prompting a reassessment of neutrophil functions. These questions concern the structure of NETs, as well as the inducers and inhibitors of their formation. The question is whether all neutrophils are capable of NET formation; if not, what determines selected cells to carry out such a process? Do NETs cooperate with the migration and chemotaxis of neutrophils and other immunocompetent cells? If so, how? Is the formation and/or elimination of NETs a critical aspect of an innate immune response in a series of pathophysiological mechanisms?
Two decades of research into the formation of neutrophil extracellular traps have provided a wealth of data defining the pleiotropic range of NET activity. However, many questions remain unanswered, and opinions concerning the significance of NETs in the human body are not unanimous. A detailed understanding of mechanisms regulating NET formation might provide a basis of diagnostics and perhaps therapy for diseases in the pathogenesis of which neutrophils are involved.

About the Journal

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to Biomedicines, be it original research, review articles, or developing Special Issues of current key topics.

Editor-in-Chief

Prof. Dr. Felipe Fregni
1. Neuromodulation Center and Center for Clinical Research Learning, Spaulding Rehabilitation Hospital and Massachusetts General Hospital, Harvard Medical School, Boston, MA 02114, USA
2. Department of Epidemiology, Harvard T.H. Chan School of Public Health, Boston, MA 02115, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
