Synaptic Transmission: From Molecular to Neural Network Levels

Message from the Guest Editors

The communication between neurons is at the foundation of every neurophysiological activity, such as sensory perception, learning, and memory. It is well known that in the central nervous system, the number of neurons is around 1012, and the number of synapses can reach a thousand billion. Here comes the need for both bottom-up and top-down approaches to understand brain activity: how do the different components of neural machinery interact to generate such complex systems? How can the understanding of new pathways be used for pathologies' treatments? Investigations at these two levels are both needed to reach a comprehensive view of brain activity. While the microscale level has often been the leading actor of neuroscience research, the mesoscale-to-macroscale level has attracted more and more attention in the last decade.

This Special Issue aims to provide a broad picture of the latest discoveries on synaptic transmission and its impact on network activities. Both experimental and computational works are welcomed, unraveling new properties of specific synapses or how they affect neural networks activity, both in physiological and pathological conditions.

About the Journal

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Editor-in-Chief

Prof. Dr. Felipe Fregni

1. Neuromodulation Center and Center for Clinical Research Learning, Spaulding Rehabilitation Hospital and Massachusetts General Hospital, Harvard Medical School, Boston, MA 02114, USA
2. Department of Epidemiology, Harvard T.H. Chan School of Public Health, Boston, MA 02115, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
