

## Special Issue

# Clinical Developments of the Tumor Suppressor p53

### Message from the Guest Editor

This Special Issue, "Clinical Developments of the Tumor Suppressor p53", will mainly focus on the most promising advancements in clinical research on how p53 and its mutations impact patients in the clinic and on the novel drugs currently advancing to clinical trials to treat this once "undruggable" target. *TP53* (p53) is the most frequently mutated gene in cancer, being altered in approximately 50% of human malignancies. In most, if not all, cancers lacking mutations, wild-type (WT) p53 is inactivated through interaction with cellular (MDM2/MDM4) or viral proteins, leading to its degradation. Because of its near universal alteration in cancer, p53 is an attractive target for the development of new targeted therapies for this disease. We invite authors to submit original research and review articles that focus on the biological functions and therapeutic potential of the p53 pathway. Potential topics include, but are not limited to, the following:

- P53 targeted therapies;
- MDM2/4 targeted therapies;
- Role of p53 in drug resistance;
- Role of p53 in secondary cancers;
- Therapeutic options for Li-Fraumeni syndrome.

## About the Journal

### Message from the Editor-in-Chief

*Biomedicines* (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
