Message from the Guest Editor

Dear Colleagues,

Astrocytes have emerged as active players in synaptic communication. They sense neurotransmitter release during synaptic activity, and in turn release gliotransmitters that can regulate synaptic function. Recent evidence further supports these concepts by revealing novel mechanisms and functional consequences of astrocyte–neuron interaction. However, the tripartite synapse and gliotransmission concepts continue to be debated. Through this Special Issue, we will try to outline the complex choreography that exists between neurons and glia, focusing on specific characteristics of the latter that render them pivotal players in memory and learning processes.

Dr. Marta Navarrete Llinás

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Biochemistry*)
