Message from the Guest Editors

Dear Colleagues,

The portrayal of the bone as a hard tissue has become obsolete following the discovery that it not only attends to classical locomotory, protection, and mineral homeostasis functions but also covers new unexpected roles. Indeed, the bone is a source of endocrine signals, through which it regulates several functions of our body, including energy metabolism, cognitive functions, male fertility, as well as organs like muscles and kidneys. Likewise, the bone receives regulatory signals from other organs. It follows that the bone actively communicates with other organs and participates in whole body homeostasis, in ways that are still in part unknown. Therefore, understanding the mechanisms involved in the bidirectional cross-talk that exists between the bone and other organs is mandatory to guarantee the health of the entire body.

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Biochemistry*)
